

REPORT ON ANONYMOUS APPEALS TO THE WOMEN'S COUNCIL IN THE IMF OF OSHSU DURING 2019-2021.

In order to support the health status of international students in the faculty since the beginning of the work of the women's council provides anonymous counseling medical care for all the students.

International students of Osh State University are in an active reproductive age. From 2019 to the present time, the women's council has conducted anonymous consultations and referrals to the relevant specialists. Among the diseases of students, there is a high prevalence of diseases of the genitourinary system, most of which are gynecological diseases. According to the anonymous complaints about gynecological diseases of female students, in the first place were menstrual irregularities, complaints of pain during menstruation, discharge from the genital tract with an unpleasant odor, ovarian cysts and itching. Also, along with the detection of diseases according to the complaints of the students, a number of anatomical features were also revealed in the form of a contracted pelvis and an infantile uterus.

Main gynecological diseases among students of IMF, OshSU 2019-2021 years.

Among the factors in the formation of diseases of the female genital organs, a large proportion is accounted for by sexual behavior. There were cases of treatment for termination of pregnancy in the early stages, they even asked for help for toothache.

During the pandemic, the number of students' applications was reduced, since most of them left for their homeland and this time they are studying in a distance format.

The number seeking help in women's council of the faculty composes at this time 57 students. Although at distance learning online time women's council continues to advise its students online through social messengers and networks.

The women's council is always ready to lend a helping hand to the needy students of the international medical faculty.
