

**Review
of the Educational and Methodological Complex
for the discipline
“Child Diseases (Faculty Pediatrics)”, VI semester
for 3rd-year students enrolled in the program
(560001) – General Medicine (GM)
of the International Medical Faculty
of Osh State University**

The Educational and Methodological Complex for the discipline “Child Diseases (Faculty Pediatrics)” presented for review is a well-structured academic and methodological work developed in full compliance with the Main Educational Program of the International Medical Faculty of Osh State University for the 2025–2026 academic year.

The program demonstrates a systematic and modern approach to teaching faculty pediatrics and is aimed at forming solid theoretical foundations and practical clinical competencies in the field of pediatric medicine. The discipline content reflects current scientific data on the etiology, pathogenesis, clinical manifestations, diagnosis, differential diagnosis, treatment, and prevention of the most common diseases in childhood.

The educational materials ensure a consistent integration of fundamental medical knowledge with clinical practice. Particular attention is paid to the development of students' skills in clinical reasoning, patient examination, interpretation of laboratory and instrumental investigations, and formulation of evidence-based therapeutic strategies.

The structure of the course includes lectures, clinical practical classes, and independent student work, which together provide a comprehensive framework for mastering professional competencies. The learning outcomes, assessment criteria, and evaluation tools are clearly defined and correspond to the requirements of modern medical education standards.

The Educational and Methodological Complex meets contemporary educational and methodological standards for higher medical education and can be confidently recommended for use in the educational process of the International Medical Faculty of Osh State University.

Associate Professor, Department of Pediatrics, KRSU:

Abduvalieva S. T.

**Review
of the Educational and Methodological Complex
for the discipline
"Child Diseases (Faculty Pediatrics)", VI semester
for 3rd-year students
under the program (560001) – *General Medicine (GM)*
of the International Medical Faculty
of Osh State University**

The submitted Educational and Methodological Complex for the discipline "Child Diseases (Faculty Pediatrics)" has been developed in accordance with the Main Educational Program of the International Medical Faculty of Osh State University for the training of 3rd-year students majoring in (560001) – General Medicine (GM) for the 2025–2026 academic year.

The educational and methodological complex clearly defines the goals of mastering the discipline, aligned with the national educational standards for training specialists with higher medical education. The program is focused on the study of pediatric diseases and the acquisition of modern knowledge on the diagnosis, treatment, and prevention of diseases in children and adolescents at both outpatient and inpatient stages, taking into account current data on etiology, pathogenesis, clinical course, and preventive strategies.

The discipline contributes to the development and improvement of students' competencies in clinical examination of pediatric patients, formulation of diagnoses, differential diagnosis, and implementation of comprehensive therapy in hospital settings. Particular attention is paid to hematological, endocrine, and allergic diseases in childhood, their differential diagnosis, principles of treatment, and prevention.

The selected competencies, knowledge, and practical skills fully comply with contemporary requirements for academic programs in higher medical education. The learning outcomes, mechanisms for mastering the discipline, assessment tools, and methods for monitoring the formation of professional competencies are comprehensively and systematically presented.

The content of the discipline, lecture plans, clinical practical classes, and independent student work are aimed at the formation of learning outcomes RO-7, RO-8 through the professional competencies PC-15, PC-17, and PC-18 in accordance with the Main Educational Program of the International Medical Faculty for the specialty (560001) – General Medicine (GM) for the 2025–2026 academic year.

Taking into account the high scientific, methodological, and practical level of the presented materials, the Educational and Methodological Complex is recommended for implementation in the educational process of the International Medical Faculty of Osh State University.

Head of the Department of Pediatrics 1
Associate Professor of the Department:

Turdubaev K.T.
