Methodical handbook for 4-6 course students of medical institutions, clinical residents and doctors. «Diabetes Mellitus and Pregnancy»: The study of the characteristics of pregnancy and childbirth in women with diabetes mellitus is one of the most important areas in modern obstetrics. This is especially true given the high incidence of this disease among pregnant women today. This disease has a significant impact on the health and well-being of women and requires an integrated approach to diagnosis, treatment and prevention.

Therefore, understanding the characteristics of pregnancy and childbirth in women with diabetes is a key aspect of modern obstetric practice, contributing to the development of effective treatment strategies and prevention of complications, as well as improving the quality of life of women.

Pre-Existing Diabetes , hypoglycemia in pregnancy, GDM, Pharmacological therapy, Management,
